Navigation error suggestions   ☑
Show suggestions when a web address does not resolve or a connection cannot be made

Search and URL suggestions   ☐
Use a prediction service to show related queries and popular websites as you type in the address bar

Help improve Chrome security   ☐
To detect dangerous apps and sites, Chrome sends URLs of some pages you visit, limited system information, and some page content to Google

Safe Browsing (protects you and your device from dangerous sites)   ☑
Sends URLs of some pages you visit to Google, when your security is at risk

Use page predictions   ☐
Preload pages for faster loading and offline reading

Access payment methods   ☐
Allow sites to check if you have payment methods saved

Usage and crash reports

Commentary:

In this lab we explored the settings site on an Android simulator. These settings are simple yet effective in controlling how your device works. I learned that these settings should be checked frequently, and especially after you notice something that isn't behaving how you expect it to. Companies can use this information by teaching it to their employees so that they can be better at monitoring them themselves. Or they could manage them completely so that employees can change the settings.
